Chahat Gogia
Transactions on Software Engineering

Dear Chahat Gogia,

Please consider the resubmission of *Adaptive HACT: Information Limits and Safe Adaptation of Verification Evidence* by Da Xu and Fei Wang, returned unsubmitted on 2 November 2026.

We have revised the front matter to follow the IEEE Computer Society journal template, placing the abstract and index terms in the title block and using the template's first section and affiliation formatting. The main manuscript is 12 pages including references. The scientific text, figures, and reported results have been retained.

The accompanying Journal First novelty statement addresses the two requested criteria and describes the relationship to earlier publicly archived development versions. The technical supplement remains a separate file.

Thank you for your guidance and consideration.

Sincerely,
Da Xu
